## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-15, 25, and 36-40 drawn to a method/system for testing a transducer classified in class 324, subclass 710
- II. Claims 16-24 and 26-35 drawn to a self-testing piezoelectric transducer circuit classified in class 324, subclass 727.

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as testing a transducer by using a signal processing circuit to analyze the response of a transducer to a test signal. Invention II has separate utility to have a self-testing piezoelectric transducer circuit, that contains a signal source with a spectrum overlapping the natural resonant frequency of transducer and contains a switching element. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Donna Suchy on April 22, 2005 (and a message was left) to request an oral election to the above restriction requirement, but did not result in an election being made.

Art Unit: 2858

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement may be traversed (37 CFR 1.143).
